ADDITIONAL TERMS AND CONDITIONS
THE CREMATION PROCESS

Cremation is performed to prepare the deceased for memorialization and it is carried out by placing the deceased in a casket or alternative container and then placing the casket or alternative container into a cremation chamber, or retort, where they are subjected to intense heat and flame. During the cremation process, it may be necessary to open the cremation chamber and reposition the deceased in order to facilitate a complete and thorough cremation. Through the use of a suitable fuel, incineration of the container and its contents is accomplished by raising the temperature substantially (extreme temperature) and all substances are consumed, or driven off except bone fragments (calcium compounds) and metal (including dental gold and silver and other non-human materials) as the temperature is not sufficient to consume them.

Due to the nature of the cremation process, any personal possession or valuable materials such as dental gold and silver, or jewelry (as well as any body prostheses or dental bridgework) that are left with the Decedent and not removed from the casket or container prior to cremation may be destroyed and become non-recoverable, or if not destroyed, will be disposed of by the Crematory at its sole discretion. The Authorizing Agent understands arrangements must be made with the Funeral Home to remove any such possessions or valuables.

Following a cooling period, the cremated remains, which will normally weigh several pounds in the case of an average-size adult, are then swept or raked from the cremation chamber. The crematory makes a reasonable effort to remove all of the cremated remains from the cremation chamber, but it is impossible to remove all of them, as some dust and other residue from the process are always left behind. In addition, while every reasonable effort will be made to avoid commingling, inadvertent or incidental commingling of minute particles of cremated remains from the residue of previous cremation is a possibility, and the Authorizing Agent understands and accepts this fact.

After the cremated remains are removed from the cremation chamber, all non-combustible materials (insofar as possible), such as dental bridgework, and materials from the casket or container, such as hinges, latches, nails, etc., will be separated and removed from the human bone fragments by visible or magnetic selection. The Crematory is authorized to dispose of these materials with similar materials from other cremations in a non-recoverable manner, so that only the human bone fragments will remain.

When the cremated remains are removed from the cremation chamber, the skeletal remains often contain recognizable bone fragments. Unless otherwise specified, after the bone fragments have been separated from the other material, they will be mechanically processed (pulverized), which includes crushing or grinding and incidental commingling of the remains with the residue from the processing of previously cremated remains, into granulated particles of unidentifiable dimensions, virtually unrecognizable as human remains, prior to placement into the designated container.

CASKET / CONTAINERS

The above named Funeral Home does not offer metal caskets for cremations.

All caskets and alternative containers must meet the following standards:

- 1 . Be composed of materials suitable for cremation;
- 2 . Be able to be closed to provide a complete covering for the human remains;
- 3 . Be sufficient for handling with ease;
- 4 . Be resistant to leakage or spillage;
- 5 . Be able to provide protection for the health and safety of crematory personnel.

The Crematory is authorized to inspect the casket or alternative container, including opening it if necessary. In the event there is a leakage or damage, the Crematory may contact the Authorizing Agent directly for instructions. The Crematory reserves the right to open the casket or alternative container to verify the identity of the deceased.

Many caskets that are comprised of combustible materials also contain some exterior parts, e.g., decorative handles or rails, that are not combustible and that may cause damage to the cremation equipment. The Crematory, at its sole discretion, reserves the right to remove these non-combustible materials prior to cremation and to discard them with similar materials from other cremations and other refuse in a non-recoverable manner.

URN / TEMPORARY CONTAINERS

In the event the urn or other container selected is insufficient to accommodate all of the cremated remains, the excess will be placed in a separate receptacle. The separate receptacle will be kept with the primary receptacle and handled according to the disposition instructions on this form. Crematory requires that all urns or containers provided be appropriate for shipping or permanent storage, and that in the case of an adult, it is recommended that the urn or container be a minimum size of 200 cubic inches. Unless a suitable urn is provided for the cremated remains, the Crematory will place the cremated remains in a container furnished by the Crematory.
